UTEST supplies various analog and digital instruments for length measurement and evaluation.

Engineers Squares are useful instruments for setting up and checking machines and projects for high accuracy.

Set of Feeler Gauges is a tool used to measure gap widths which are used in engineering to measure the clearance between two parts.

UTEST Steel Rulers come in rigid and flexible versions.

Although their primary purpose is accurate measurement, they can also be used as guides for laying out lines, and if rigid enough, for cutting.
